

**Play Before  
Pixels**

## **Logo guidelines**

Version 1.0 · September 2026

© 2026 AlphaPlay LLC. Play Before Pixels is a trade name of AlphaPlay LLC.

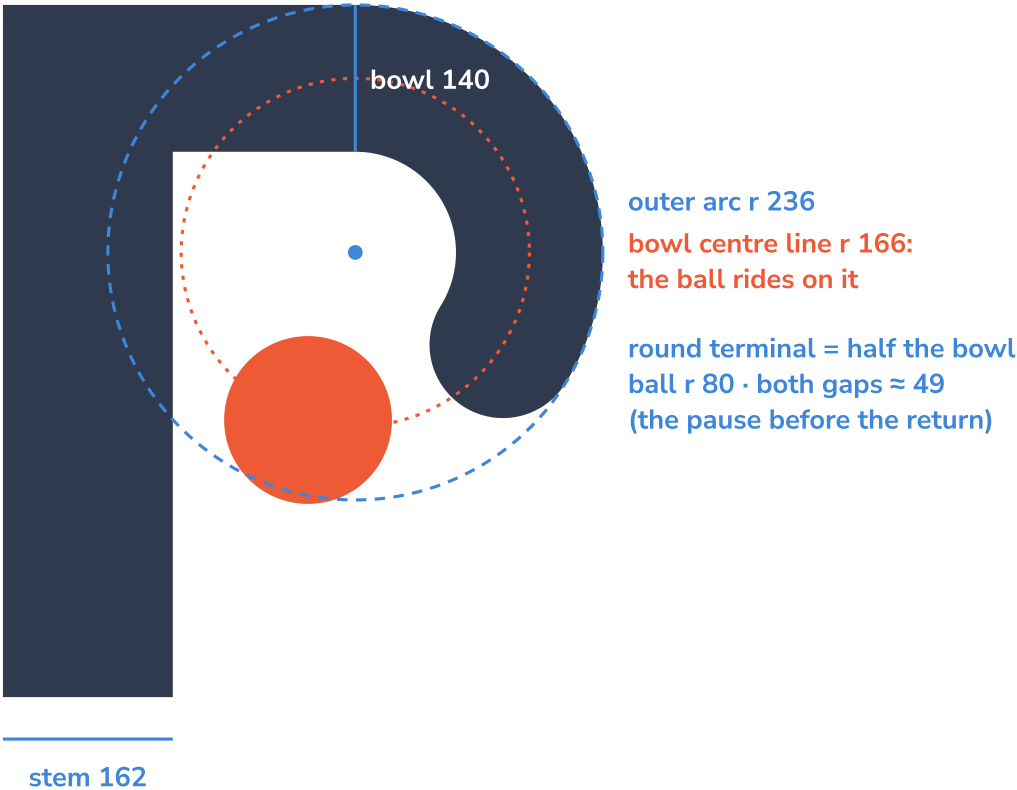

THE IDEA

# The Return

Our mark is the P of **Play**. Its square-cut stem curves into an open bowl, and a ball comes back to close it. That is the serve and return of talk and play: a grown-up says something, and a child answers.

The small gap before the ball is the pause that gives the child a turn. The same ball dots the i in **Pixels**, because play comes first.

The ball is the brand's one device. Use it as a bullet, a page number or a sticker. The tagline's period can be a ball too: *Talk, touch and play come first.*

| PART                                  | UNITS (CAP HEIGHT 660) | AT 1 IN / 25.4 MM TALL | NOTES                                             |
|---------------------------------------|------------------------|------------------------|---------------------------------------------------|
| Stem                                  | 162                    | 6.2 mm                 | Matches the stem of Bricolage Grotesque 800       |
| Bowl                                  | 140                    | 5.4 mm                 | Ends in a round terminal as wide as the bowl      |
| Ball                                  | r 80 (diameter 160)    | 6.2 mm                 | Sits on the bowl's centre line, inside the letter |
| Gaps (ball to stem, ball to terminal) | 48.9 / 49.2            | 1.9 mm                 | Small cut: 61.2 / 60.5 units (2.4 mm)             |

## WHAT TO USE WHERE

# The logo family

**Horizontal lockup** · the default. Site header, book back covers, letterhead, merch hang tags.

**Stacked lockup** · square and tall spaces: tote bags, teacher-resource covers, the About page.

**Wordmark** · one line, where height is tight: book spines, footers, email signatures. The mark's P is set into "Play".

Never place the mark directly in front of the one-line wordmark (it reads "P Play"). The lockups already pair them.

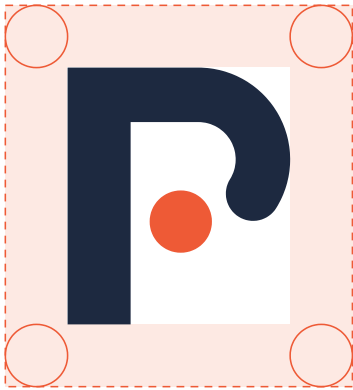

**Mark (left) and small cut (right)** · avatars, favicons, cover corners, stamps. The small cut has heavier strokes and wider gaps for 16–31 px and tiny embroidery.

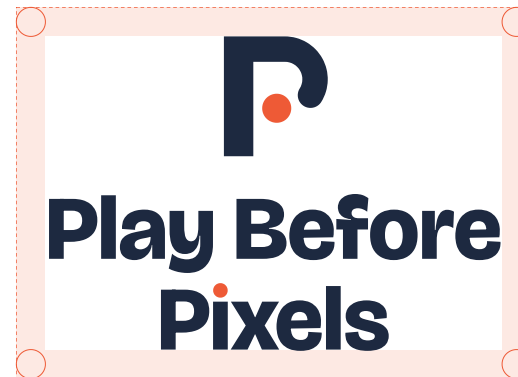

## ROOM TO BREATHE

# Clear space

Keep a clear zone around every version equal to **one ball**: the diameter of the ball in that artwork. Nothing else (text, edges, other logos, photo detail) goes inside the shaded area. The SVG and PNG files already include half a ball of margin.

Mark

Stacked lockup

Horizontal lockup

Wordmark (the ball on the i sets the unit)

## SMALL, NOT SMALLER

# Minimum sizes

| VERSION           | SCREEN            | PRINT      | EMBROIDERY  | STAMP      |
|-------------------|-------------------|------------|-------------|------------|
| Mark              | 32 px tall and up | 12 mm tall | 25 mm tall  | 12 mm      |
| Mark, small cut   | 16–31 px          | 6–12 mm    | 16–25 mm    | 8–12 mm    |
| Horizontal lockup | 180 px wide       | 40 mm wide | 90 mm wide  | 40 mm wide |
| Stacked lockup    | 110 px wide       | 28 mm wide | 60 mm wide  | 30 mm wide |
| Wordmark          | 180 px wide       | 40 mm wide | 100 mm wide | 45 mm wide |

Below 16 px, or below 16 mm when stitched, do not use the mark. Use the name in plain type, or a woven label.

Gaps at the smallest embroidery size: mark 1.9 mm at 25 mm tall; small cut 1.5 mm at 16 mm tall (1.5 mm is the usual floor). One-colour embroidery and stamps always use the black or white files, never a tint.

Board-book spine: use the small cut (spines are usually 10–15 mm) with the wordmark rotated to read top to bottom.

## COLOUR

## Colour versions

● Ink #1D2940
● Tomato #EE5A36
● Sun #F5B820
● Sky #3D86D8
● Paper #FFFFFF
● Sun tint #FEF4D8

**Primary** · ink P, tomato ball,  
on paper

On wash and tints (sun tint  
shown)

On sun: ink P, tomato ball

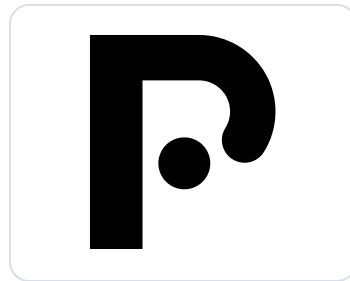

**Reverse** · on ink: paper P, the  
ball stays tomato

On tomato: paper P, **sun** ball

On sky: paper P, sun ball

**One colour black** · stamps,  
embroidery, fax, newsprint

**One colour white** · on dark  
garments, foil, laser-etch

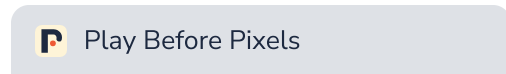

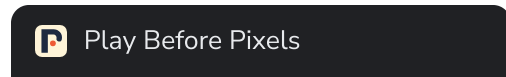

**Sticker** · on photos and busy  
grounds, use the white die-cut  
version

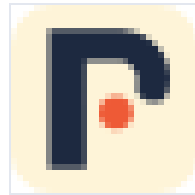

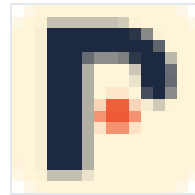

Grass and plum are not logo grounds: on them, use one-colour white. The ball is only ever tomato, sun, black or white.

## IN USE

# Small screens and social

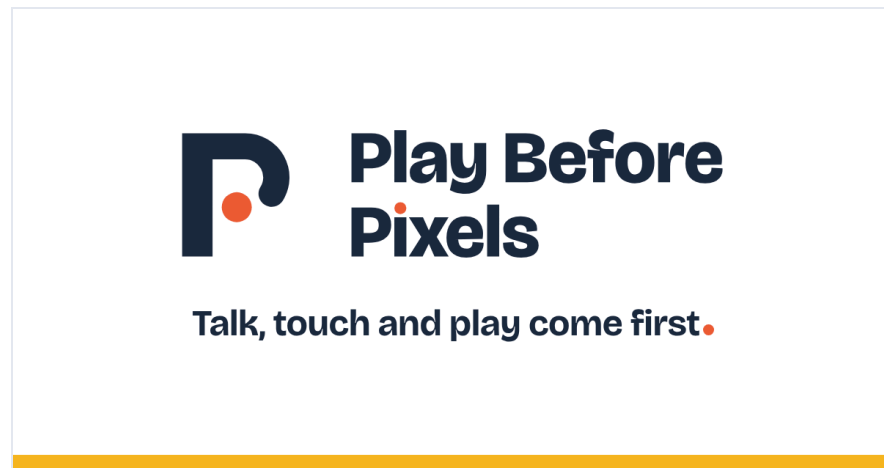

**Favicon** · favicon.svg switches to a paper P in dark mode; the PNG fallbacks (16, 32, 48) sit on a sun-tint tile so they never vanish in a dark tab.

16 px and 32 px (enlarged to show pixels) and the 180 px Apple touch icon.

**Social avatar** · ink mark on sun tint. It survives a circle crop. Never a white P in a tomato circle.

Link preview (og-image-1200x630.png).

## KEEP IT THE SAME EVERYWHERE

## Do and don't

**Do** · use the supplied files, on paper or a light tint

**Do** · reverse on ink; the ball stays tomato

**Do** · use the sticker on photos and patterns

**Do** · use one-colour black for stamps and stitching

**Don't** · stretch, squash or skew

**Don't** · rotate or tilt

**Don't** · recolour outside the rules

**Don't** · add shadows, outlines or effects

**Don't** · enlarge the ball or move it outside the letter

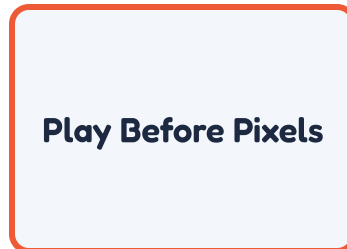

**Don't** · put a white P in a tomato circle

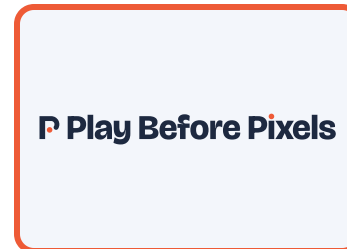

**Don't** · swap the ball for a pixel, heart or icon

**Don't** · nest a small p inside the P

**Don't** · retype the name; the wordmark is drawn, not typed

**Don't** · put the mark in front of the one-line wordmark

**Don't** · place the full-colour mark on a busy ground

## THE KIT

# Files and next steps

| FILE                                                        | USE                                             |

## BEFORE THE MARK IS FILED OR PRINTED IN BULK

1. Reverse-image search mark.svg and mark-small.svg (Google Lens, TinEye).
2. USPTO design-code search: letter P with circles (codes 27.03, 26.01) in classes 9, 16, 25, 28, 35 and 41, plus a WIPO Global Brand Database image search.
3. Compare side by side with Patreon's current mark, Product Hunt and the “P + ball” pickleball stock templates.
4. A trademark attorney runs a knockout search, then files the mark together with the wordmark, owned by AlphaPlay LLC.
5. The founder makes and dates her own edits (for example ball size, terminal angle or colour) in src/build.py and keeps them in git.
